

Difference A-scan vs TIME — front-surface peak cancels; peaks in the curve are void echoes

Sample 11 · CV12 · prism voids

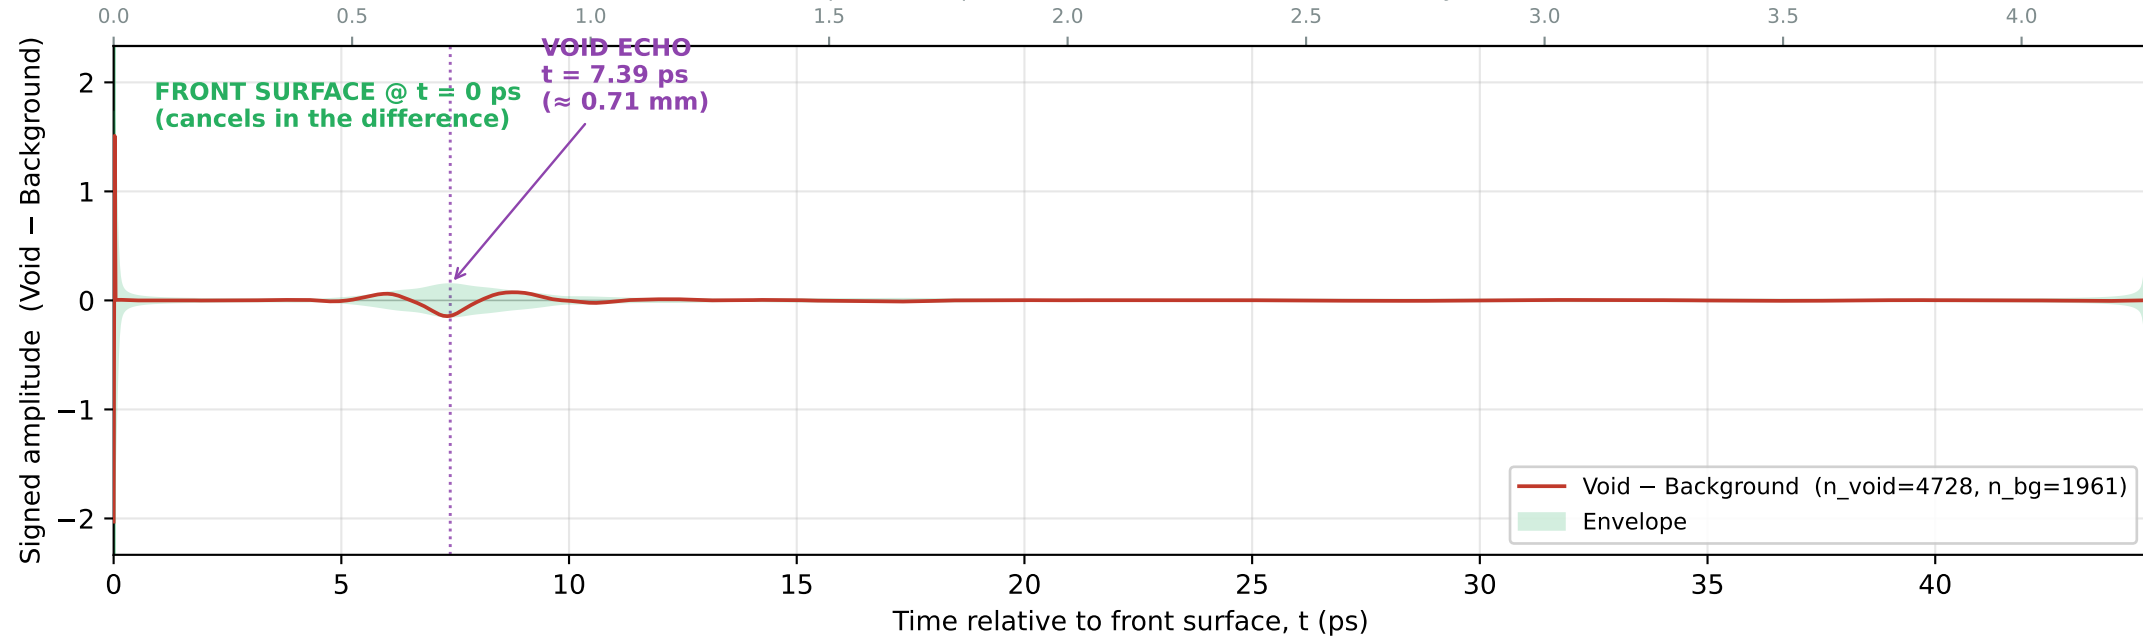

Equivalent depth at $n = 1.57$ (mm) — for reference only

BACK WALL
 $t = 52.4$ ps ($\equiv 5$ mm)
designed thickness;
beyond THz penetration

Sample 4 · CV04 · 4 cylindrical voids

Equivalent depth at $n = 1.57$ (mm) — for reference only

BACK WALL
 $t = 52.4$ ps ($\equiv 5$ mm)
designed thickness;
beyond THz penetration
